PROFESSIONAL SUMMARY

Full Stack Engineer and Technical Lead with 8+ years building and scaling multi-tenant SaaS, web, and mobile platforms (React, Next.js, Node.js, TypeScript) serving 100K+ users. Architected white-label systems deployed across 15+ organizations with subscription models, payment gateway integrations, and role-based multi-tenant architecture. Drove 40%+ performance improvements through query optimization and read replica architecture. Active user of AI-assisted development tools (GitHub Copilot, Cursor IDE, LLM-driven prompt engineering) to accelerate delivery. Combines deep technical ownership with product thinking and hands-on mentorship across 250+ production commits.

TECHNICAL SKILLS

Backend: Node.js (Express, NestJS), REST API Design, Microservices, Event-Driven Architecture, WebSockets (Socket.io), Authentication & Authorization, API Versioning

Frontend: React (Hooks, Performance Optimization), Next.js, TypeScript, React Native, Zustand, React Query, Redux Toolkit, Tailwind CSS, SSR, SPA Architecture

AI & Tooling: GitHub Copilot, Cursor IDE, LLM-Assisted Development, Prompt Engineering for Engineering Workflows

Cloud & DevOps: AWS (Lambda, ECS, S3, RDS, CloudFront), Serverless, CI/CD Pipelines, GitHub Actions, Docker, Nginx, Linux Server Management

Databases: MongoDB, PostgreSQL, MySQL, Redis, Query Optimization, Indexing, GraphQL

SaaS & Payments: Multi-Tenant Architecture, Role-Based Access, Payment Gateway Integrations (PhonePe, Online Gateways), Webhook Handling, Subscription Workflows

Practices: System Design, Agile/Scrum, Performance Optimization, High-Availability Architecture, Git, Jest, Sentry, Instana

Familiarity: Docker, Kubernetes, Terraform

PROFESSIONAL EXPERIENCE

Senior Engineer | Daxko

Apr 2024 — Jan 2026 | Remote

- **Owned end-to-end engineering and architecture** for a white-label, multi-tenant SaaS mobile and backend platform serving 15+ YMCA organizations; accountable for design, delivery, and production stability.
- **Engineered and delivered a platform-agnostic mobile app** (React Native + Expo + TypeScript) consolidating two separate platforms into a single codebase with Expo Router and React Query for standardized navigation and data fetching.
- **Architected white-label and onboarding automation**, enabling per-client theming, dynamic app icons, and automated provisioning that reduced new client setup time significantly.
- **Drove performance improvements** — query optimizations and read replica architecture improved DB read latency by 40%+; CRON and job tuning reduced scheduled task resource usage.
- **Hardened security and compliance:** fixed SQL injection vectors, removed sensitive logging, resolved high-severity npm vulnerabilities across production environments.
- **Owned API surface and integrations** — delivered Schedule, Notifications, Event Logs, Fundraising, and Check-In APIs; improved API response times via prepared statements and query refactors.
- **Championed observability and operational excellence**, contributing to a 60% reduction in critical bug backlog through systematic monitoring and tracing (Instana); sustained ~99.9% uptime via Kubernetes autoscaling.
- **Mentored peers and drove code quality** with 250+ production commits; established patterns (Zustand + React Query, testing/linting) for maintainability and scale.

Senior Software Developer | Kalyani Navyug Media Pvt. Ltd.

Jul 2021 — Mar 2024

- **Owned full-stack delivery across 4+ concurrent SaaS products**, driving architecture, implementation, and production stability for multi-tenant platforms handling 100K+ monthly active users.
- **Designed scalable backend systems** (Node.js, Laravel, REST APIs) supporting role-based access, high-traffic workflows, and subscription-based models.
- **Implemented secure payment processing pipelines** including gateway integrations (PhonePe and others), webhook verification, and atomic transactions with zero reconciliation issues.

- **Delivered offline-first features** using IndexedDB and Web Workers, reducing runtime failures by ~70% in low-connectivity environments; integrated real-time WebSocket server for push notifications and remote control actions.
- **Built async, queue-driven pipelines** for bulk imports and file processing, improving data ingestion reliability and reducing operational failures by ~80%.
- **Built dynamic admin platforms** for master data, approvals, analytics, and automated communications, reducing manual operational effort by ~60%.
- **Acted as technical owner and mentor**, conducting code reviews, enforcing best practices, and elevating engineering quality across a growing team.

Software Developer | PinnacleWorks Infotech Pvt. Ltd.

Jan 2019 — Jun 2021

- **Owned end-to-end full-stack delivery** of large-scale education and CRM SaaS platforms, driving architecture, development, and production readiness.
- **Designed secure, role-based access systems** supporting multiple user personas across academic, administrative, and operational departments.
- **Implemented complex workflow automation** across admissions, finance, inventory, and academic operations; integrated payment gateways and third-party APIs.
- **Delivered analytics dashboards** enabling data-driven decisions; collaborated with cross-functional teams to translate operational pain points into scalable solutions.

KEY PROJECTS

MalharMusic — Multi-Tenant Music Playback & Scheduling SaaS Platform

Tech: Laravel, React, React Native, MySQL, Redis, IndexedDB, Web Workers, AWS S3/CloudFront, Socket.io, PWA

- **Built multi-tenant SaaS platform** with role-based portals for admins, outlets, artists, and customers; implemented audio streaming with smooth playback, seeking, and browser-friendly caching.
- **Delivered PWA-first experience** with offline-first schedule execution using IndexedDB and Web Workers; integrated self-hosted Socket.io (WebSocket) server for real-time push notifications and remote playback control.
- **Implemented secure OTP-based authentication** and payment gateway integration (PhonePe); developed async queue-driven pipelines for bulk media ingestion and resumable imports.

Non-Profit Mobile App (White-Label) — Daxko

Tech: React Native, Expo, TypeScript, Expo Router, React Query, Zustand

- **Architected cross-platform React Native (Expo) mobile app** with white-label capabilities: per-client theming, dynamic icons, automated onboarding across 15+ client deployments.
- **Built member and staff experiences** with notifications, maps, calendar scheduling, barcode/QR check-in; integrated i18n and shared design system for multi-region rollout.

Non-Profit Admin Platform & Integrations — Daxko

Tech: SvelteKit, TypeScript, MySQL, Capacitor, Redis, AWS Pinpoint, Kubernetes

- **Owned backend API surface** for Schedule, Notifications, Event Logs, Fundraising, and Check-In modules; delivered performance optimizations reducing DB read latency by 40%+.
- **Implemented Kubernetes health checks, HPA rules, and autoscaling** achieving ~99.9% uptime; hardened security with SQL injection remediation and dependency audits.

Campfire Digital — E-Commerce & Digital Rental Platform

Tech: Laravel, React, React Native, React Query, MySQL, Tailwind CSS

- **Built hybrid e-commerce platform** supporting physical purchases and time-bound digital rentals with secure access control, payment gateway integration, and automated email/SMS/WhatsApp workflows.

EDUCATION & CERTIFICATIONS

Bachelor of Commerce — Surguja University, 2017

NIELIT 'A' Level — National Institute of Electronics and Information Technology

Oracle Certified Java Programmer (OCJP 6)
